

RNA modifications and decoding

Eric Westhof

Architecture & Réactivité de l'ARN,
Institut de Biologie Moléculaire et Cellulaire, CNRS
Université de Strasbourg,
France

2022

The genetic code is
 - redundant
 - quasi-universal

The genetic code is
 - it is the result of molecular recognition during biological evolution
 - its representation is arbitrary

How to optimize the ribosome « rhythm »?
 How to optimize protein synthesis and folding?

Increasing stability of network interactions

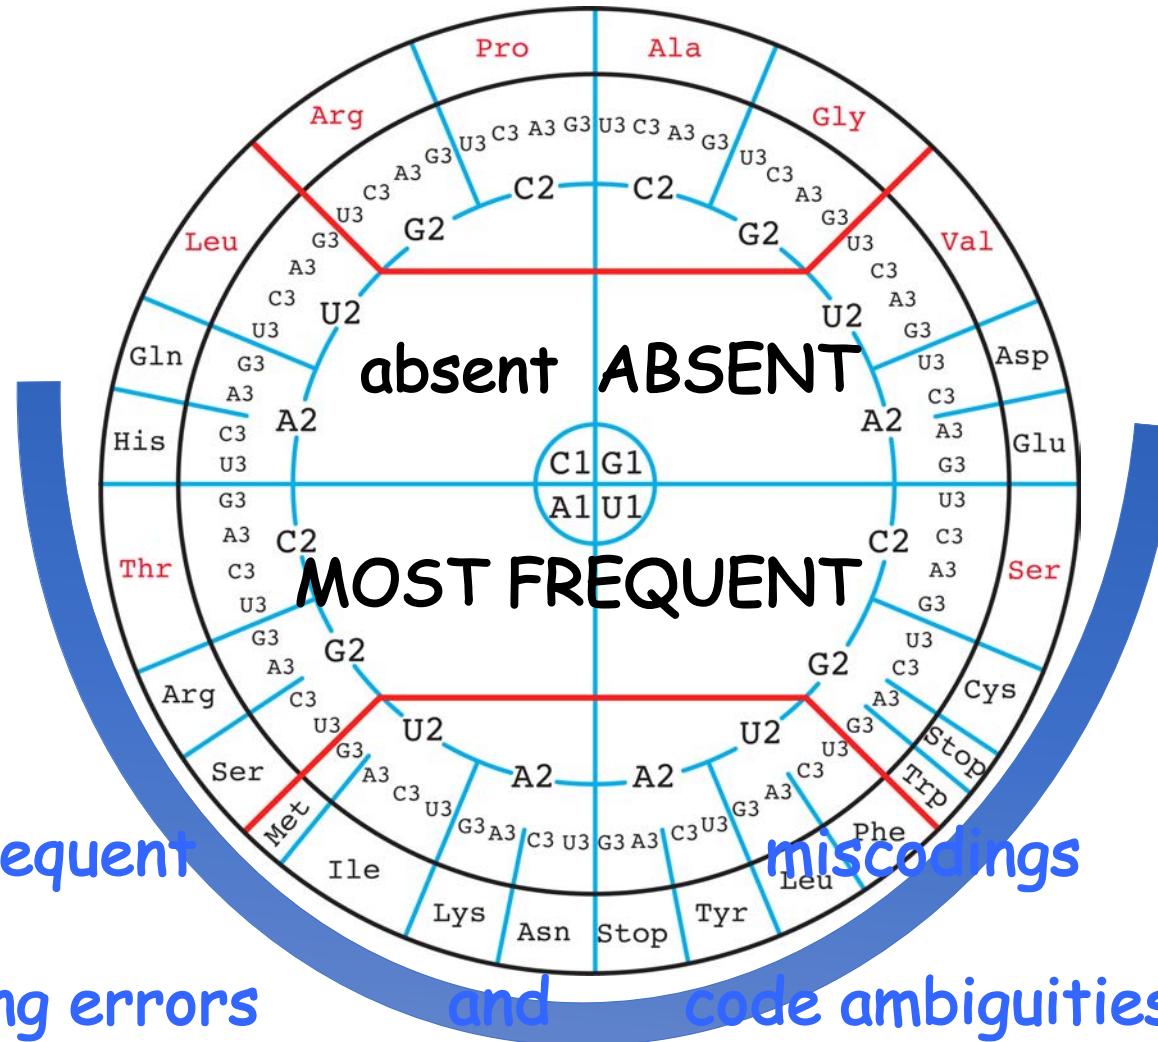

Grosjean, H. and E. Westhof (2016). "An integrated, structure- and energy-based view of the genetic code." Nucleic Acids Res **44**: 8020-8040.

STOP and 2-codons boxes mainly in the south

Code deviations, recoding, codon reassignments

**A microfluidic-based assay
recapitulates eukaryotic ribosomal
translation**

Model system
uses the
intergenic
IRES of
Cricket
Paralysis Virus
coupled with
the GFP as
reporter

INTERmolecular
(2 molecules)

ASL

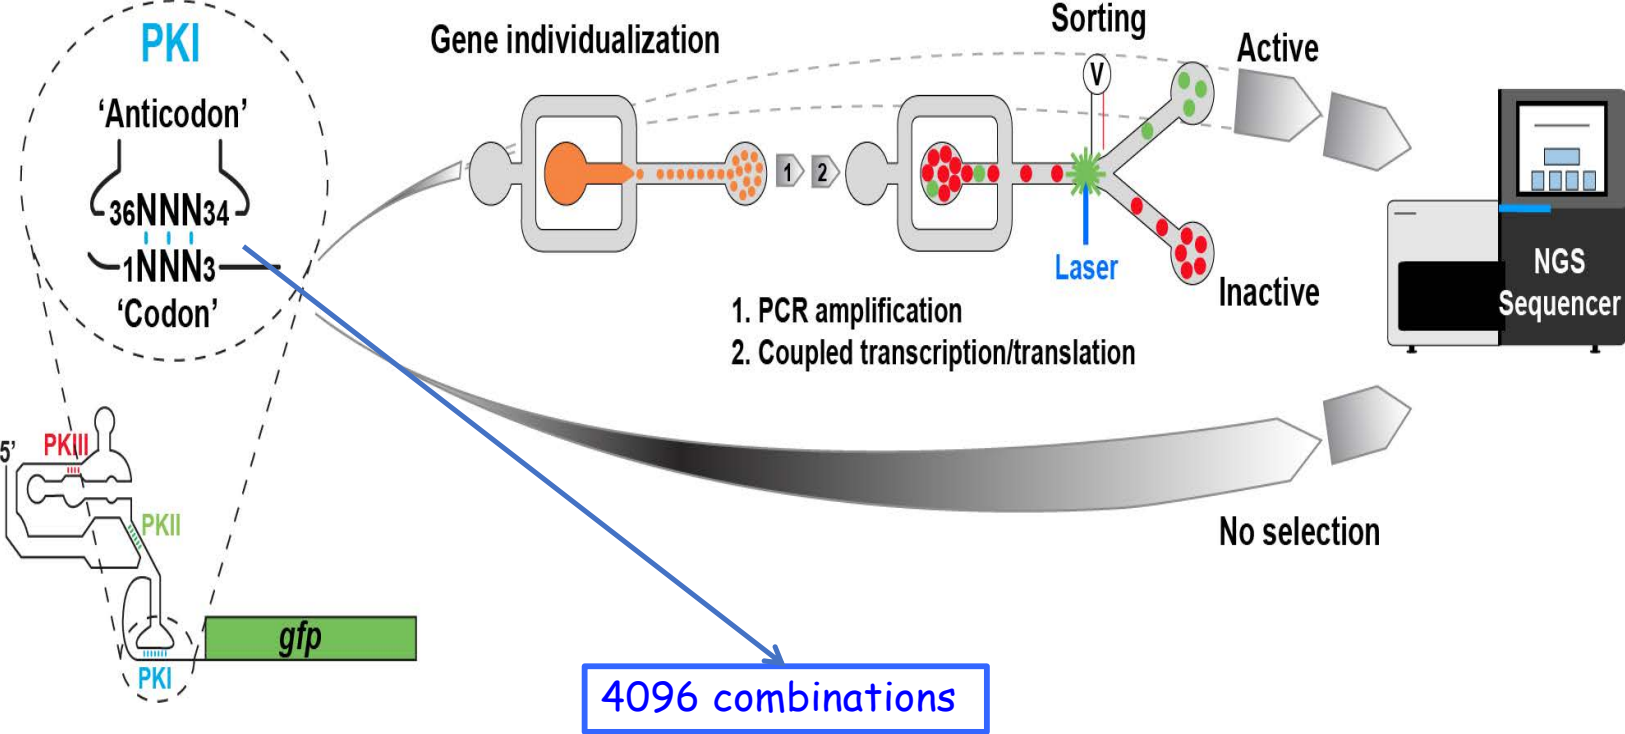

INTRAmolecular
(1 molecule pseudoknot)

PKI

Functional selection

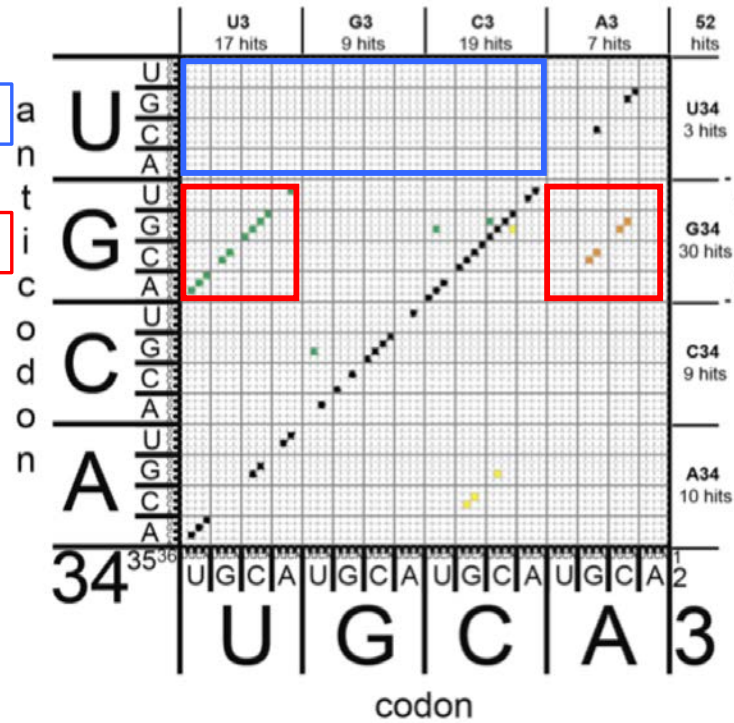

'Stringent' selection

U34oG3 NOT present

G34oU3 present

Poor decoding with U34

G34oA3 present

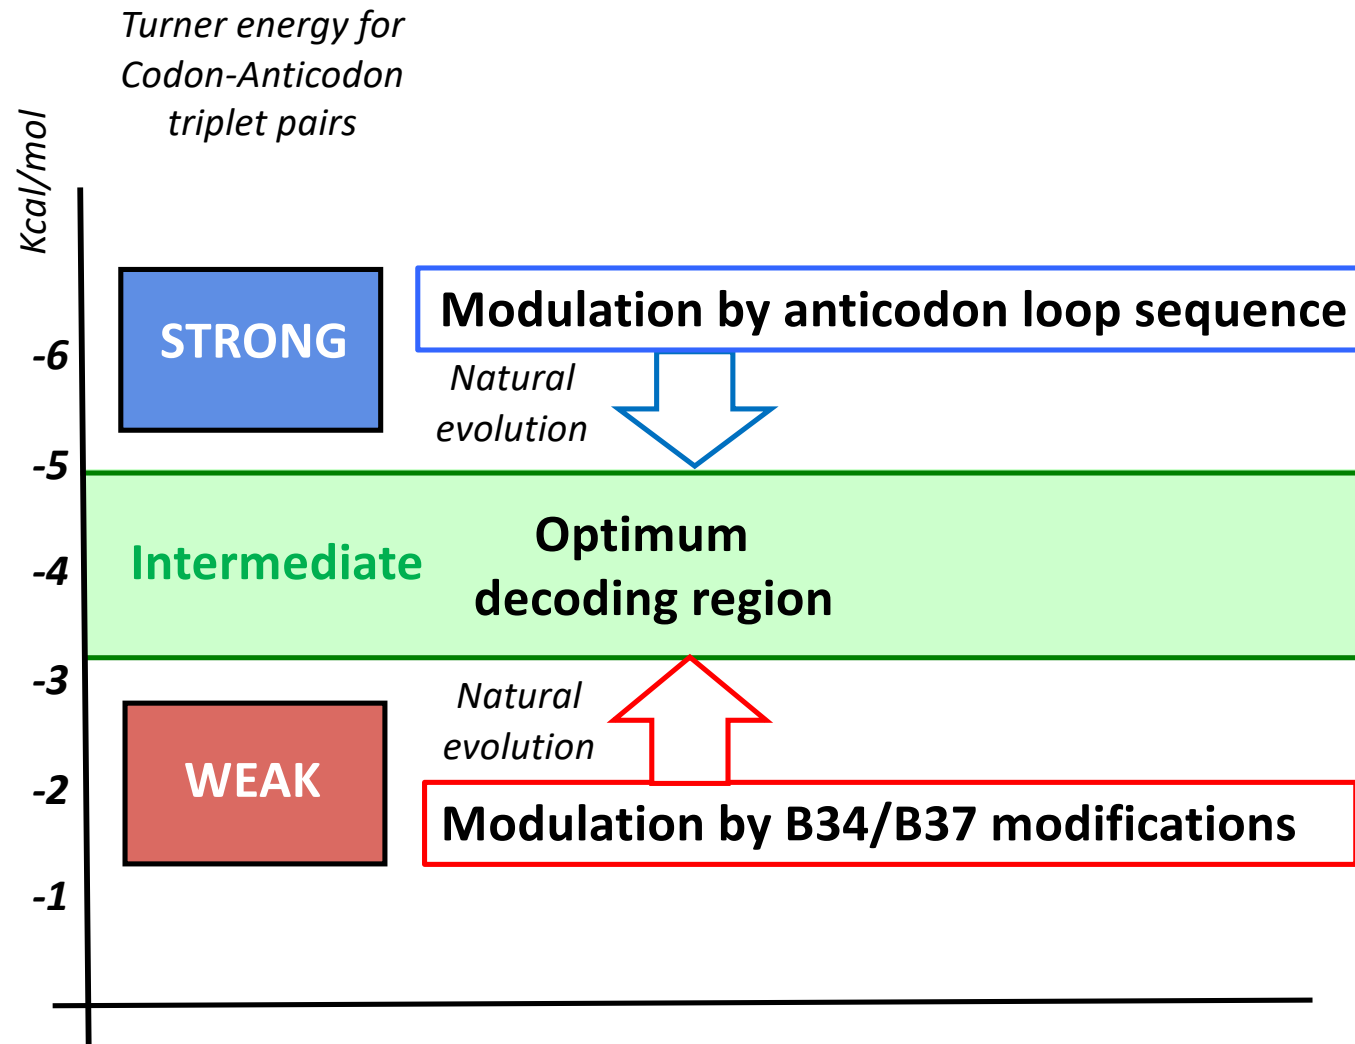

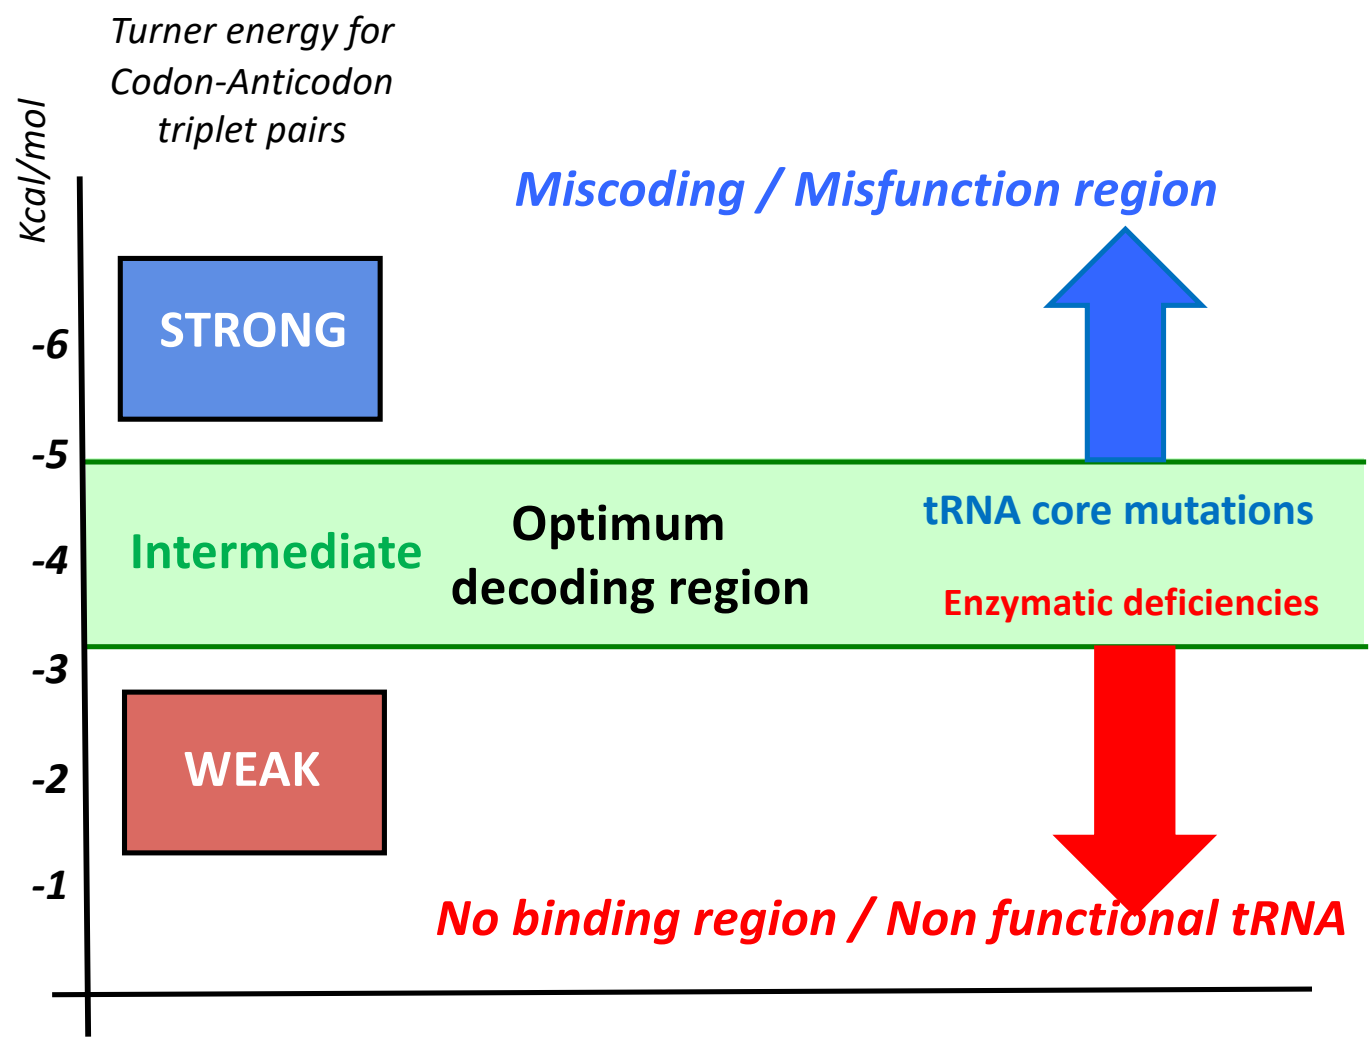

BLUE = Absent codon/anticodon combination

- ∅ : no data f
- N* : unknowr
- # : modified

31 39
32 38 ar
33 Sp 37
34 35 36

G/C-rich RNA world with oldest amino acids

Increase in A/U and amino acid diversity coupled with modification enzymes

Grosjean, H. and E. Westhof (2016). "An integrated, structure- and energy-based view of the genetic code." *Nucleic Acids Res* **44**: 8020-8040.
